Your **Business** From  
All Forms of  
**Cybercrime**

# About VEEZO

An increasing number of businesses are falling prey to cyberattacks. As cybercrime technology evolves, your organization's sensitive data becomes more vulnerable to risks.

VEEZO can help safeguard your confidential information by protecting your data as well as shielding your network. It analyzes network communication in real-time, and puts an end to malicious activities before they can cause harm.

Rest assured that your corporate assets and networks are safe with VEEZO by your side!

**Detection,**  
**Fortification,**  
**Management.**

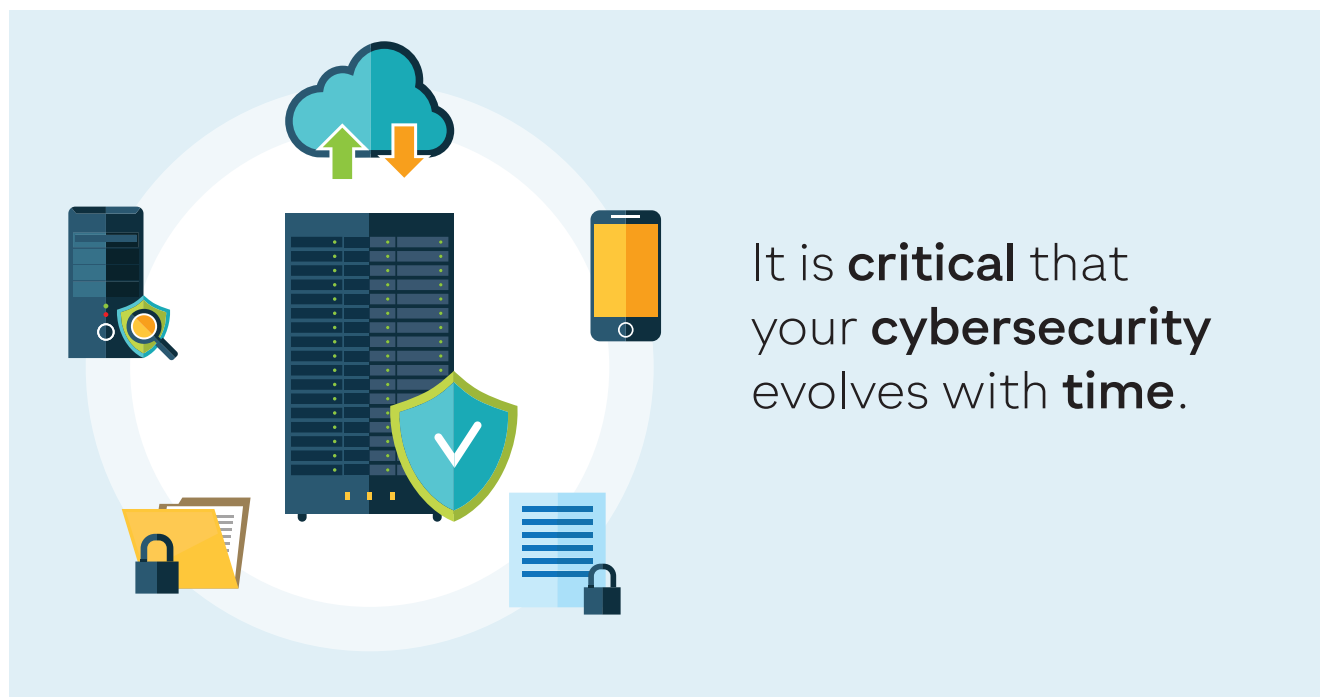

# Why Choose VEEZO?

Traditional security systems are inefficient and ineffective in mitigating modern-day cyberattacks, which are becoming increasingly veiled, vicious, and destructive. A single loophole is enough to destroy an organization and shatter its brand.

The growing need for advanced cybersecurity measures is palpable across industries. Further, organizations want to stay one step ahead of cybercriminals and proactively work towards foreseeing, intercepting, and mitigating IT risks.

Modern security solutions and services need to be capable of empowering organizations to protect themselves from malevolent intentions. This becomes even more critical at the time of migrating to new digital platforms or cloud-based and mobile systems, or whenever the organization is most vulnerable.

VEEZO enables your organization to protect itself with or without the presence of a CIO.

# How VEEZO Works

In order to curtail the adverse effects of a cyberattack on your organization, it is crucial to minimize the time taken to respond to the attack upon its detection.

VEEZO enables quick interception and implements effective action, saving precious time. It also optimizes the overall security, which enables organizations to deal with existing and imminent threats.

- ✓ The longer you take to remedy cyberattacks, the more hostile the consequences will be.
- ✓ Save valuable time between detecting and combatting an incident with VEEZO.

- ✓ VEEZO analyzes, intercepts, and alerts IT officials the instant an incident is detected.
- ✓ Organizational IT teams may extrapolate the remedies to their systems without worrying about the threat proliferating as VEEZO will intercept and eliminate the very source of the attack.

# Collaborative Analysis

VEEZO analyzes the movement of communication in real-time, without interfering with ongoing operations, and responds immediately upon uncovering a threat. This is instrumental in averting further malicious activity and behaviors.

CIOs and other IT personnel are alerted of the threat and informed of the implications as well as the counteroffensive actions that need to be employed, depending on the severity of the attack.

Users can gain centralized visibility over their business units regardless of their number and location.

Every doubtful communication is relayed at the VEEZO Threat Analysis Center to discern its legitimacy. VEEZO employs revolutionary technology to analyze and respond to existing and/or looming cyber threats. Any communication classified as malicious is automatically intercepted and eliminated.

VEEZO **smartly investigates** the **content** and **context** of all **inbound** and **outbound communication**.

# Plug and Protect

VEEZO is an autonomous solution. It activates in a matter of minutes, and scrutinizes as well as analyzes end-to-end network communications for risks and threats.

Your existing tools will easily synchronize with the Veezo Threat Analysis center, thereby empowering your organization with the most contemporary threat detection and protection technology there is today.

## Proving Your Investment in VEEZO before Making It

At InterHyve, we believe in offering our customers nothing but the best. In our effort to ensure you get the desired results from our cybersecurity solution, we present to you our PoV (Proof of Value), where you can determine the following:

- ✓ Did VEEZO perform as per your expectation? Was it quick to respond to potential threats? How much effort was involved?
- ✓ How easy was it for the majority of people across your enterprise to adopt VEEZO and integrate it with their processes?
- ✓ How were the most critical performance metrics measured? Did they enhance the PoV?
- ✓ How many people were using VEEZO at the start and the end of the PoV?

We understand that data and network security and integrity are paramount for your organization's growth.

Leverage our expertise to stay secure while being prepared for the worst. Contact us for PoV today!
